website

B- Heavy Equipment Inspection & Third Party Certification

Why should you hire MASSCO?

MASSCO should become your partner for machinery inspections because we do nothing else than heavy equipment inspections every day. Certainly, there are other companies available.

Check out a selection

of our valued customers. We offer machine expertise, consulting, valuation and remote service support.

Earthmover Inspections Our engineers have many years of experience. Most of them have a background as

technicians with a Caterpillar-, Komatsu-, or a Crane distributor. Some of our inspectors still repair machines and

trucks. If you need a quality check for a backhoe loader, a used wheel loader or a crawler excavator we can help

because it is our daily business. Trucks and Concrete Equipment Here you can find the right inspector for used

trucks. MASSCO technicians know about road trucks, tractor heads, trucks with cranes and trucks for ready-mix

concrete. No matter what brand you buy, we can inspect Mercedes, MAN, Iveco, Scania, Renault or any other

make. We are qualified to inspect concrete pumps of Schwing, Liebherr, Stetter, Putzmeister or Sanny. Quarry and

Mining Equipment We love the big stuff and it is a pleasure for our specialists to inspect machinery for quarry and

mining. We have no fear to perform qualified inspections for big Komatsu or Caterpillar trucks. We can offer a

profound check of blast whole rock drills and of course for compressors and large generators. Crusher and Screens

Very specific and often with hidden problems. Crushers and screening equipment is difficult to evaluate. Since we

are now over 5 years in the machinery inspection business, we can pretend having many processing plants

inspected. Our specialists have inspected cone crushers, jaw crushers, impact crushers and various screens.

Foundation Engineering Machines The inspection of used rotary drilling rigs, diaphragm wall equipment, piling

machines and anchor drilling rigs is a very difficult job. We are not the engineering specialists but we can look back

to inspection of some larger machines. Evaluation of these engineering machines can be offered and would be

performed by the MASSCO company owner. Lifting Equipment Inspections Some inspectors in the MASSCO

network have been trained to perform safety and quality inspections for cranes. Checking out an LMB or

measuring the play in the swing bearing of a crane is a procedure the technicians are used to do. We inspect reach

stackers and forklifts from 1 to 100 ton lift capacity. Specializing in CAT & Volvo We are specialized in Caterpillar

and Volvo equipment. In most areas, we can offer qualified inspections including reading of internal machine

computers. We can gain access to the so-called ECM and store a CAT-PSR or a Volvo-Matrix. For Caterpillar we

offer remote-service. MASSCO approved engineers some of our engineers are approved and certified by MASSCO

for machine safety inspections or statutory inspections. Appraisal and valuation of machines is another part of our

business. **Special Equipment Inspections** We have some experience with special equipment. Some inspections have

been done in the past on forestry equipment and blast hole rock drills for quarry and mining. Due our long

experience in heavy machinery, we are even able to offer inspections for used drill rigs and piling machines.
